Who we are

Afronovation, Inc. is a strategy, technology and digital transformation company founded in 2018, headquartered in Cary, North Carolina, with a presence in Côte d'Ivoire, Guinea and Sierra Leone. We pair senior advisory leadership with in-house platform engineering. Our clients keep authority over their data, content and decisions; we bring reusable platforms, proven methods and the people to deliver quickly.

What we do

Program & Change Management

Guiding change, driving success.

Complex programmes delivered on time and in scope, with adoption that lasts.

- Enterprise PMO & portfolio delivery
- Organisational change & adoption
- Stakeholder engagement

Technology & Platform Development

Building platforms for growth.

Secure, scalable platforms, portals and apps on a reusable service architecture.

- SaaS, portal & enterprise platforms
- UI/UX design & prototyping
- Cloud, API & integration

Digital Transformation

Reimagining the future, today.

Strategy, operating models and processes that turn ambition into measurable value.

- Digital strategy & national roadmaps
- e-Government & process redesign
- Data, analytics & AI enablement

Cybersecurity & Digital Trust

Securing the digital state.

Protection, compliance and trust services for institutions that hold national data.

- Risk assessment & security audits
- Data protection & compliance
- National CERT/CSIRT readiness

Who we serve

Governments & public institutions

Ministries, agencies and national programmes modernising services, investment promotion and cross-agency operations.

Development partners & investors

Institutions that need credible pipelines, governed data and funder-ready digital programmes.

Diplomatic missions & diaspora

Embassies, consulates and diaspora offices connecting citizens abroad to services and national opportunity.

Enterprises & scale-ups

Organisations integrating proven identity, AI, communications and payments services without building them in-house.

Why Afronovation

01

Sovereign by design

Clients keep authority over their official data, content and decisions. Afronovation provides the platform, methods and people.

02

One proven architecture

Every platform is composed from the same enterprise services, so each new mission launches faster and with less risk.

03

Adoption, not just delivery

PMP, PROSCI, Agile/SAFe, Lean and CISM disciplines are built into every engagement, from strategy to sustained use.

04

A proven ecosystem

Built on X-Road®, the exchange layer behind Estonia's digital state, with partners who have taken it to 18+ countries.

What we have built

Afronovation is an **enterprise platform company**. A shared catalogue of Enterprise Digital Services is composed into mission-specific platforms, so proven capabilities, not one-off code, power every new mission.

Mission-specific platforms

EmbassyOS
FLAGSHIP
Diplomatic Services · embassyos.com
Sovereign operating system for embassies and consulates: citizen services, diaspora engagement and diplomatic operations, independently branded per mission.

Zimbabwe Digital Investment & Economic Intelligence Platform
PILOT
Investment Promotion
Governed national project registry, tiered investor pathway, ministry workspaces and deal execution, running as a controlled pilot for Zimbabwe.

CivisOS
PILOT
Diaspora Intelligence
Multi-tenant diaspora registration, population intelligence and structured engagement for governments, with the Dia explainable-AI engine in development.

Bridge55
OPERATIONAL
Travel & Tourism
Pan-African federated travel platform connecting visas, flights, stays, mobility and experiences, deployed country by country.

Souvera Intelligence Terminal
OPERATIONAL
Strategic Intelligence
Country intelligence, investment signals and decision support for governments, investors and diaspora economic actors.

Souvera Markets
PILOT
Financial Markets
Market information, investment insight and economic intelligence across African and global markets.

ElectionOS
PILOT
Governance & Elections
Transparent, auditable and policy-driven elections for organisations and institutions, in English and French.

BridgeX
OPERATIONAL
Secure Data Exchange
The foundation of interoperable digital services: signed, encrypted exchange between institutions, built on X-Road®.

BridgeForces
PILOT
Public Safety & Security
Asset registry and accountability for security services: armouries, equipment and chain of custody, governed and audited.

One proven architecture

PILOT In pilot **ROADMAP** Roadmap service **DELIVERED** Delivered with partners

Digital government

Afronovation digitises the services a government actually delivers. One governed platform carries two front doors: a **government portal** where officials do the work, and a **citizen and business portal** where the public applies, pays and receives decisions. Services are activated one at a time, on shared foundations, so each new service is a configuration, not a new procurement.

Two portals, one governed platform

Service catalogue

01

Services citizens can feel

Priority services go live within the first 90 days, not after years of procurement: file a return, apply for a permit, book an appointment, receive a decision, all with a status the applicant can see.

02

Revenue and compliance

Digitised filing, permits and fees widen the revenue base, shorten collection cycles and create the audit evidence that oversight and development partners expect.

03

Skills and local ownership

Every deployment carries a training and knowledge-transfer plan that builds a local professional pool, so government operates and extends the platform itself.

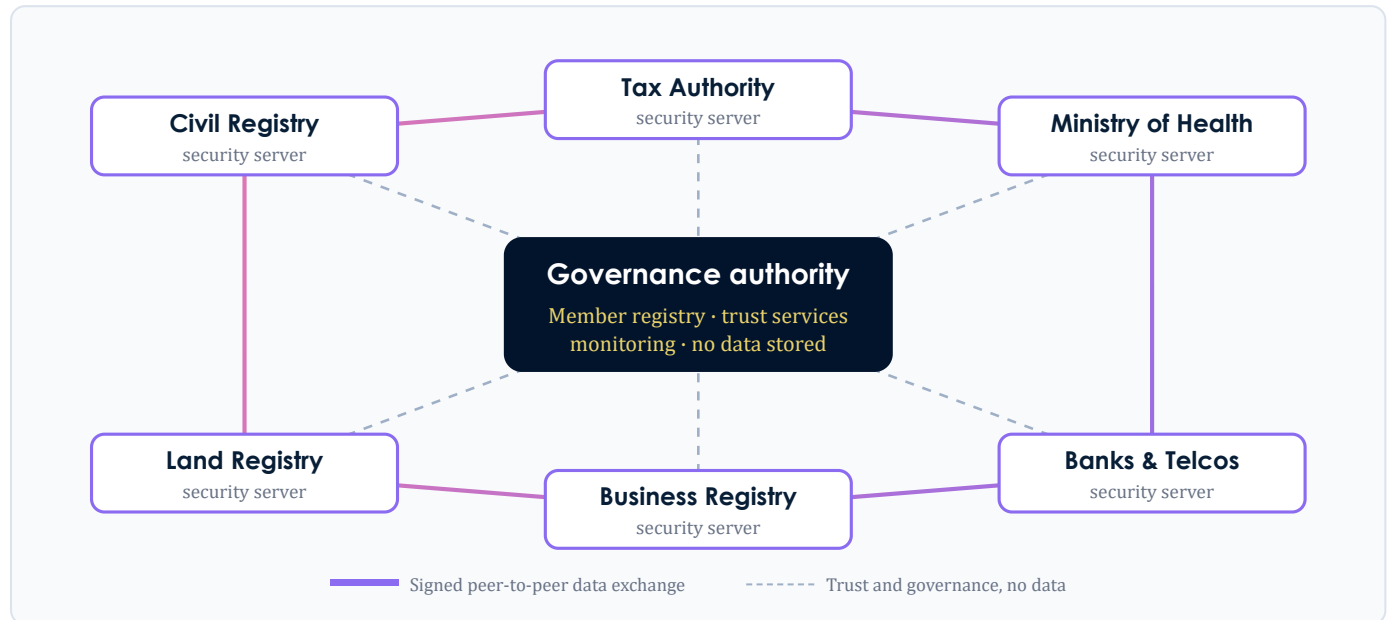

From selection to live service

Designed for the conditions services are actually used in

Every digital service depends on institutions trusting each other's data. **BridgeX** connects ministries, registries, agencies and banks directly, peer to peer, with no central database to breach. Every exchange is encrypted, signed, time-stamped and logged, so it carries legal weight.

Built on X-Road®

BridgeX is Afronovation's secure data-exchange service, built on X-Road®, the open-source exchange layer that has run Estonia's digital state since 2001 and is now used by governments on four continents.

UXP-ready

Where a government has standardised on the Unified eXchange Platform (UXP), used by governments in Africa and beyond, Afronovation designs services to connect to it. The national standard is the government's choice.

Trust building blocks

BridgeX

Secure data exchange

Signed, encrypted, logged exchange between institutions. Built on X-Road®.

BridgeTrust ♦

Trust services

PKI certificates, digital signatures, e-seals and timestamps for legally valid documents.

BridgeRegistry ♦

Base registries

Population, business, land and address registries as single sources of truth.

BridgeConsent (ROADMAP)

Consent & data tracking

Citizens grant consent and see which institution accessed their data, and why.

BridgeIdentity (ROADMAP)

Digital identity

Strong authentication for citizens, businesses and officials across every service.

Cyber readiness

Security operations

Security audits, SOC and CSIRT design, and incident-response planning.

Once-only

Citizens never resubmit data the state already holds.

Legal evidence

Every exchange is provable: who sent what, to whom, and when.

No central honeypot

Data stays with its owner; there is no single database to breach.

Cross-border ready

Federated exchange with other countries and regional bodies.

Advisory & partner ecosystem

Afronovation leads every engagement and remains the single point of accountability. For specialised components it brings in partners with decades of national-scale delivery, so governments get proven technology without managing a supply chain.

Advisory services

Digital leadership as a service

Chief Digital Officer and CTO support for ministries: strategy, vendor oversight and technical decisions.

Digital policy, legal & regulatory

Frameworks for e-transactions, e-signatures, data protection and cybersecurity.

Enterprise architecture & standards

National architecture, data standards and GovStack-aligned building blocks.

Cybersecurity & compliance

Risk assessments, security audits, data-protection compliance and CSIRT design.

Managed services & support

SLA-backed operations, maintenance, hosting and team augmentation.

Financing & benefits realisation

Funder-ready business cases, partnership readiness, monitoring and evaluation.

How we deliver with partners

Your government

One contract · one accountable partner

Prime contractor

Programme leadership, platforms, change and adoption, quality and security assurance

Roksnet

X-Road® implementation and trust services; creator of StateOS, the mobile e-state. Active in more than 18 countries on four continents.

Involved in Estonia's X-Road since its inception; court, state budget and statistical data-collection systems. 15+ years.

Our commitments to every government client

01

Single point of accountability

One contract, one programme lead, one team answerable for results.

02

National data sovereignty

Government keeps authority over its data, content and decisions.

03

Knowledge transfer built in

Every engagement leaves trained local teams behind.

04

Continuity by contract

Transfer, OEM or continuity arrangements agreed at the outset.

How we deliver

FEATURED ENGAGEMENT · ZIMBABWE

A national investment platform, delivered as a working pilot

Concept Note v0.3 proposed a governed digital investment platform as the first visible layer of NDAP. Within months it was running end to end: projects created, reviewed, approved and published; investors registered, verified and accredited; engagements carried through to memoranda of understanding.

37 Platform records	26 Published projects	8 Priority sectors
10 Provinces covered	6 User personas	7 Control gates

Pilot position, September 2026.

National Digital Acceleration Program (NDAP)

A modular, 365-day pathway that moves public institutions from digital ambition to visible, governed, platform-enabled execution. **Investment intelligence is the entry point; government modernisation is the pathway.**

How to start with Afronovation

- Executive briefing**
A working session with your leadership on priorities and fit
- 30-day discovery**
Scope, governance model, success measures and roadmap
- 60-90 day pilot**
The first visible service live, with real users
- 365-day programme**
Scale through NDAP, with local teams trained to run it
